

Sample 8-Month BP & Blood Sugar Report

AI Health Guardian — Demo / Project Sample Data

Note: This report contains fictional sample values created for demonstration purposes and is not a real medical record.

Month	BP (mmHg)	Fasting Sugar (mg/dL)	Post-Meal Sugar (mg/dL)	Status
January 2026	128/82	96	132	Normal
February 2026	130/84	99	138	Slightly Elevated
March 2026	126/80	94	128	Normal
April 2026	132/86	102	145	Slightly Elevated
May 2026	134/88	105	149	Elevated
June 2026	129/83	101	140	Slightly Elevated
July 2026	125/79	95	130	Normal
August 2026	122/78	92	124	Normal

Trend Summary

- BP improved from 134/88 mmHg in May to 122/78 mmHg in August.
- Fasting blood sugar decreased from 105 mg/dL in May to 92 mg/dL in August.
- Post-meal blood sugar decreased from 149 mg/dL in May to 124 mg/dL in August.
- Overall, the sample data demonstrates an improving trend over the 8-month period.
